

# Deleting visits

Sergio Revilla  
@elrepicante

based on Martin Tschischauskas (@martynasc) slides

# The common way to implement a Delete

1. A user visits a page that contains a link or a button to delete the content
2. The user clicks it
3. An action receives the id of the element to be deleted
4. Redirects the user

The user clicks a link or a button to delete the content

Http Method: **DELETE**

URL path: **/<resource>**

HTML template: **(no template)**

# Implementing the link

app/views/visits/index.html.erb

```
<h2><%= @location.name %> - <%= @location.city %></h2>
<ul>
  <% @visits.each do |visit| %>
    <li>
      <%= visit.user_name %>
      <br/>From: <%= visit.from_date %>
      <br/>To: <%= visit.to_date %>
      <br/><%= link_to 'edit', edit_location_visit_path(@location,
visit) %>
      <%= link_to 'delete', location_visit_path(@location,
visit), method: 'delete', confirm: "Are you sure?" %>
    </li>
  <% end %>
</ul>
```

```
<%= link_to 'delete',  
  location_visit_path(@location, visit),  
  method: 'delete', confirm: "Are you sure?" %>
```

## Unknown action

**The action 'destroy' could not be found for VisitsController**

# Exercise #3 I

Implement the action `destroy` in the controller entries. Use the method `#destroy`.
